TECHNICAL REFERENCE NOTE

ARTESYN LPS100-M SERIES

150 Watts (forced air)
100 Watts (convection)

PRODUCT DESCRIPTION

Advanced Energy's Artesyn LPS100-M series of open-frame AC-DC power supplies datasheet features ITE and medical safety approvals. The series offers a choice of six single output models, with voltages of 5 V, 12 V, 15 V, 24 V, 48 V or 54 V. Each model also provides an isolated 12 V fan output. The main output of the 54 V model features POE (Power over Ethernet) isolation. LPS100-M series power supplies have a typical full load power conversion efficiency of 88% and with a height of only 1.29 inches offer a power density in excess of 14 W/in^3. The series is primarily designed for use in information technology equipment (ITE) and light industrial systems, as well as for equipment intended for non-patient contact and non-patient critical use in low power medical, dental and laboratory applications.

AT A GLANCE

Total Power

80 to 150 Watts

Input Voltage

90 to 264 Vac

# of Outputs

Single

RoHS

SPECIAL FEATURES

- Medical and ITE safety approvals, 2X MOPP
- Active power factor correction
- 2" x 4" footprint
- Less than 1U high
- EN61000-3-2 compliant
- Remote sense
- Power fail
- Adjustable main output
- Built-in Class B EMI filter
- Overvoltage protection
- Overload protection
- Thermal overload protection
- Isolated 12 V fan output
- LPX100 enclosure kit available
- POE isolation on main output of LPS109-M

SAFETY

TUV	62368, 60601-1
UL	62368, 60601-1
cULus	62368, 60601-1
CB	Certificate and report
CE	Mark (LVD)
CQC	Mark
UKCA	Mark

TYPICAL APPLICATIONS

- ITE
- Medical

MODEL NUMBERS

Standard	Output Voltage	Minimum Load	Maximum Load Convection Cooling ($I_{O,maxCC}$)	Maximum Load Forced Air 30CFM ($I_{O,maxFA}$)	Peak Load[1]
LPS102-M	5V	0A	16A	24A	30A
LPS103-M	12V	0A	8.3A	12.5A	14A
LPS104-M	15V	0A	6.7A	10A	11A
LPS105-M	24V	0A	4.2A	6.3A	7A
LPS108-M	48V	0A	2.1A	3.1A	3.5A
LPS109-M	54V	0A	1.85A	2.8A	3.1A

Note 1 - Peak current lasting <30 seconds with a maximum 10% duty cycle.

Options

None

ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings

Stress in excess of those listed in the "Absolute Maximum Ratings" may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply's reliability.

Table 1. Absolute Maximum Ratings

Parameter	Model	Symbol	Min	Typ	Max	Unit
Input Voltage						
AC continuous operation	All models	$V_{IN,AC}$	90	-	264	Vac
DC continuous operation	All models	$V_{IN,DC}$	120	-	300	Vdc
Maximum Output Power (Main + Fan) (convection continuous operation)	LPS102-M	$P_{O,maxCC}$	-	-	80	W
	LPS103-M		-	-	100	
	LPS104-M		-	-	100	
	LPS105-M		-	-	100	
	LPS108-M		-	-	100	
	LPS109-M		-	-	100	
Maximum Output Power (Main + Fan) (forced air continuous operation - 30CFM)	LPS102-M	$P_{O,maxFA}$	-	-	120	W
	LPS103-M		-	-	150	
	LPS104-M		-	-	150	
	LPS105-M		-	-	150	
	LPS108-M		-	-	150	
	LPS109-M		-	-	150	
Isolation Voltage						
Input to output	All Models		-	-	4000	Vac
Input to safety ground	All Models		-	-	1500	Vac
Outputs to output ground	All Models		-	-	500	Vdc
Main output to fan output	All Models		-	-	100	Vdc
Ambient Operating Temperature	All Models	T_A	0	-	+70[1]	°C
Cold Start-up Temperature	All Models	T_{ST}	-20	-	-	°C
Storage Temperature	All Models	T_{STG}	-40	-	+85	°C
Humidity (non-condensing)						
Operating	All Models		10	-	90	%
Non-operating	All Models		10	-	95	%
Altitude						
Operating	All Models		-500	-	13,000[2]	feet
Non-operating	All Models		-1,000	-	50,000	feet

Note 1 - Derate each output at 2.5% per degree C from 50°C to 70°C.
Note 2 - Derate maximum operating temperature by 1°C per 1,000 feet above 13,000 feet.

ELECTRICAL SPECIFICATIONS

Protection Function Specifications

Input Fuse

LPS100-M series power supply is equipped with an internal non user serviceable 2.5 A, 250 Vac, type 392 fuse for fault protection in both the 'line' and 'neutral' lines input.

Over Voltage Protection (OVP)

The power supply main output will latch off during output overvoltage with the AC line recycled to reset the latch.

LPS102-M

Parameter	Min	Typ	Max	Unit
V_O Output Overvoltage	6.5	/	7.5	V

LPS103-M

Parameter	Min	Typ	Max	Unit
V_O Output Overvoltage	15.6	/	18.0	V

LPS104-M

Parameter	Min	Typ	Max	Unit
V_O Output Overvoltage	19.5	/	22.5	V

LPS105-M

Parameter	Min	Typ	Max	Unit
V_O Output Overvoltage	31.2	/	36.0	V

LPS108-M

Parameter	Min	Typ	Max	Unit
V_O Output Overvoltage	62.4	/	72.0	V

LPS109-M

Parameter	Min	Typ	Max	Unit
V_O Output Overvoltage	70.2	/	81.0	V

Short Circuit Protection (SCP)

The power supply will withstand a continuous short circuit with no permanent damage. The power supply will automatically restart when the short circuit is removed. A short is defines as impedance less than 50 milliohms.

ELECTRICAL SPECIFICATIONS

Protection Function Specifications

Over Current Protection (OCP)

LPS100-M series power supply includes internal current limit circuitry to prevent damage in the event of overload or short circuit. In the event of overloads, the output voltage may deviate from the regulation band but recovery is automatic when the load is reduced to within specified limits.

LPS102-M

Parameter	Min	Typ	Max	Unit
V_O Output Overcurrent	26.4	/	38.4	A

LPS103-M

Parameter	Min	Typ	Max	Unit
V_O Output Overcurrent	13.7	/	18.0	A

LPS104-M

Parameter	Min	Typ	Max	Unit
V_O Output Overcurrent	11.0	/	16.0	A

LPS105-M

Parameter	Min	Typ	Max	Unit
V_O Output Overcurrent	6.9	/	10.0	A

LPS108-M

Parameter	Min	Typ	Max	Unit
V_O Output Overcurrent	3.4	/	5.0	A

LPS109-M

Parameter	Min	Typ	Max	Unit
V_O Output Overcurrent	3.1	/	4.5	A

Over Temperature Protection (OTP)

The power supply latches off during over-temperature condition and returns back to normal operation when the power supply is cooled down. The power supply might experience over-temperature conditions during a persistent overload on the output. Overload conditions can be caused by external faults. OTP might also be entered due to a loss of control of the environmental conditions, e.g. an increase in the converter's ambient temperature due to a failing fan or external cooling system etc.

EN60601	
CE Marking	LVD and EMC

Note 1 – To be tested with system enclosure.

ENVIRONMENTAL SPECIFICATIONS

Safety Certifications

The LPS100-M series power supply is intended for inclusion in other equipment and the installer must ensure that it is in compliance with all the requirements of the end application. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

Table 6. Safety Certifications for LPS100-M Series Power Supply System

Standard	File #	Description
UL/cUL	E182560-A60-UL-X1	US and Canada Requirements
EN62368-1	/	European Requirements
IEC62368-1	/	International Requirements
CB Certificate and Report	211-21180290-000	(All CENELEC Countries)
CE	19141	CE Marking (LVD)
UKCA	/	UKCA Marking
CQC	CQC12001084865	GB4943.1-2011

ENVIRONMENTAL SPECIFICATIONS

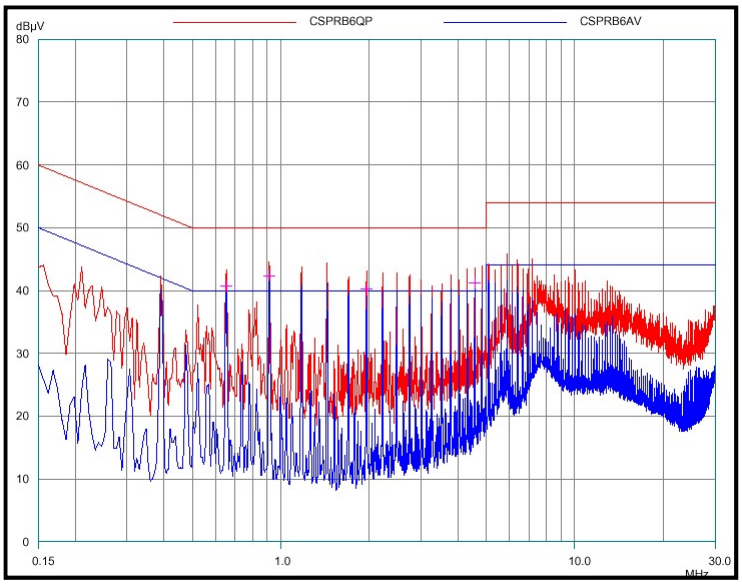
EMI Emissions

The LPS100-M series has been designed to comply with the Class B limits of EMI requirements of EN55032 (FCC Part 15) and CISPR 22 (EN55032) for emissions and relevant sections of EN61000 (IEC 61000) for immunity.

The unit is enclosed inside a metal box, tested at 150W using resistive load with cooling fan.

Conducted Emissions

The applicable standard for conducted emissions is EN55022 (FCC Part 15). Conducted noise can appear as both differential mode and common mode noise currents. Differential mode noise is measured between the two input lines, with the major components occurring at the supply fundamental switching frequency and its harmonics. Common mode noise, a contributor to both radiated emissions and input conducted emissions, is measured between the input lines and system ground and can be broadband in nature.



The LPS100-M series power supply have internal EMI filters to ensure the convertor's conducted EMI levels comply with EN55022 (FCC Part 15) Class B and EN55022 (CISPR 22) Class B limits. The EMI measurements are performed with resistive loads under forced air convection at maximum rated loading.

Sample of EN55022 Conducted EMI Measurement at 100Vac input.

Note: Red Line refers to Advanced Energy Quasi Peak margin, which is 6dB below the CISPR international limit. Blue Line refers to Advanced Energy Average margin, which is 6dB below the CISPR international limit.

Conducted EMI emissions specifications of the LPS100-M series:

Parameter	Model	Symbol	Min	Typ	Max	Unit
FCC Part 15, Class B	All	Margin	-	-	6	dB
CISPR 22 (EN55022) Class B	All	Margin	-	-	6	dB
EN 60601-1-2: 2001	All	Margin	-	-	6	dB
VCCI Class II	All	Margin	-	-	6	dB

Radiated Emissions

Unlike conducted EMI, radiated EMI performance in a system environment may differ drastically from that in a stand-alone power supply. The shielding effect provided by the system enclosure may bring the EMI level from Class A to Class B. It is thus recommended that radiated EMI be evaluated in a system environment. The applicable standard is EN55022 Class A (FCC Part 15). Testing ac-dc convertors as a stand-alone component to the exact requirements of EN55022 can be difficult, because the standard calls for 1m leads to be attached to the input and outputs and aligned such as to maximize the disturbance. In such a set-up, it is possible to form a perfect dipole antenna that very few ac-dc convertors could pass. However, the standard also states that 'an attempt should be made to maximize the disturbance consistent with the typical application by varying the configuration of the test sample'.

ENVIRONMENTAL SPECIFICATIONS

The LPS100-M series power supply is designed to meet all of its specifications during any combination of operating ambient conditions and after exposure to any combination of non-operating ambient conditions specified in this section.

Table 7. Maximum Ambient Conditions

Parameter	Model	Symbol	Min	Typ	Max	Unit
Ambient Operating Temperature	All	T_A	0	-	+70[1]	°C
Cold Start-up Temperature	All	T_{ST}	-20	-	-	°C
Storage Temperature	All	T_{STG}	-40	-	+85	°C
Shock Operating Non-operating	 All All	Accordance to IEC 68-2-27 Three positive and negative pulses in each axis 4G, half sine, 22mSec duration 30G, half sine, 18mSec duration				
Vibration Operating Non-operating	 All All	Accordance to IEC 68-2-6 to levels IEC 721-3-2 Tested in three mutually perpendicular axes Random - 1.0g rms, 10-500Hz, 20 minutes/axis Sine - 1.0g rms, 10-500Hz, 15 minutes/axis Random - 2.7 g rms, 10-2000Hz, 20 minutes/axis				
MTBF Convection 25°C Forced air 25°C	 All All	 $V_{IN,AC}$ = 115Vac >200,000hrs $V_{IN,AC}$ = 230Vac >300,000hrs $V_{IN,AC}$ = 115Vac >400,000hrs $V_{IN,AC}$ = 230Vac >500,000hrs				

Note 1 - Derate each output at 2.5% per degree C from 50°C to 70°C.

POWER AND CONTROL SIGNAL DESCRIPTIONS

AC Input (SK1)

This connector supplies the AC Mains to the LPS100-M series power supply.

Pin 1 - Neutral

Pin 3 – Line

Earth Ground (GND)

This tab connector is the safety ground connection and should be connected to AC input earth ground.

GND - Earth Ground (Safety Ground)

Main Output (SK2)

These terminals provide the main output for the LPS100-M. The Vo and the Output Return terminals are the positive and negative rails, respectively of the main output of the LPS100-M series power supply. The Main Output is electrically isolated from the Earth Ground and can be operated as a positive or negative output.

Pin 1 to 4 - Output Return

Pin 5 to 8 - +Vo

Vo Output voltage adjustment

The main output of the LPS100-M series power supply can be adjusted by +/- 10% from its nominal output voltage via the potentiometer VR1. Since the 12V Fan Supply is not independently regulated (except on LPS102-M and LPS104-M), its output voltage may change according to Vo set point.

12V Fan Supply (SK5)

The LPS100-M series power supply contains an isolated 12V output for powering a cooling fan or as a aux power source. This 12V Fan Supply is provided in a 4 pin header connector SK5.

Pin 1 and 2 - +12V VFAN

Pin 3 and 4 - FAN Return

POWER AND CONTROL SIGNAL DESCRIPTIONS

Control Signals (SK203)

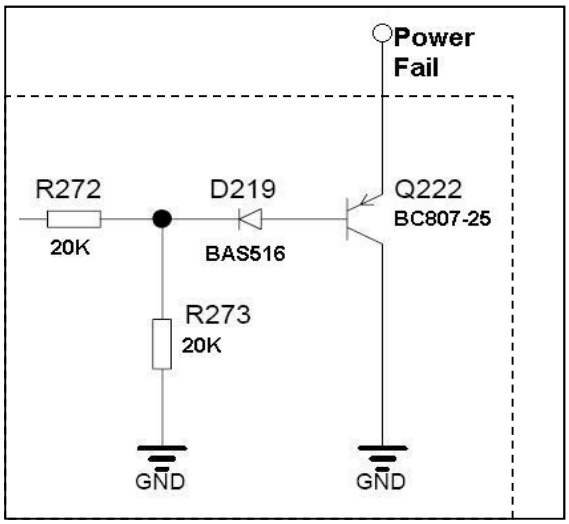
The LPS100-M series contains a 4-pin control signal header providing analogy control interface.

Output Return - (SK203 - Pin 1)

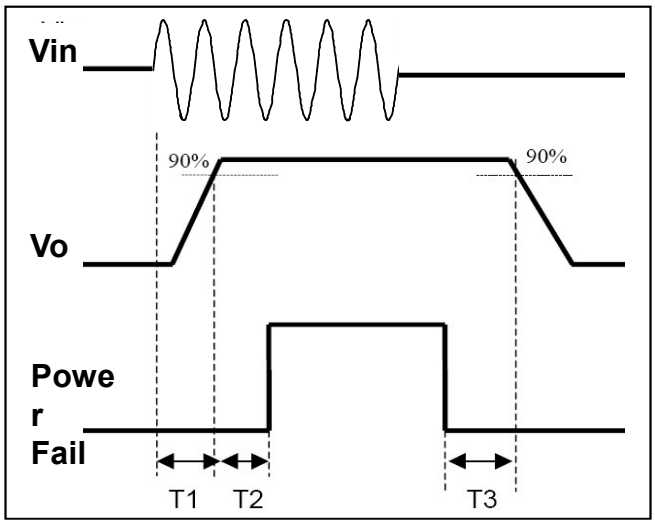
This pin is the control signal ground reference in the SK203 control header. It is electrically connected to the main output return.

Power Fail - (SK203 - Pin 2)

Power Fail is an open emitter output capable of sinking 10A maximum at 0.9V. This signal is referenced to output return. Add a pull-up resistor (10K) to an external supply (12V max) for the Power Fail signal.



Power Fail signal output equivalent circuit



Power Fail signal timing diagram

Low to High Transition (Power OK)

Mains AC Application - Delay time measurement between the application of the Mains AC at the power supply input to the availability of the regulated Vo - T1 (Turn On Delay) and the delay time T2 to when Power Fail signal indicates output voltage Vo is OK. AC line should be considered at 0 degrees at time of initial application to the AC input.

High to Low Transition (Power Fail)

Loss of Main AC - The high to low transition of the Power Fail signal shall be an indication of the impending loss of Vo regulation due to a shutdown condition such as the loss of Mains AC, Overvoltage Protection or Over Temperature Protection. The AC line should be considered at 0 degrees at the time of removal from the power supply input.

Table 8. Timing specifications of the Power Fail signal

Parameter	Conditions	Symbol	Min	Typ	Max	Unit
Turn On Delay	$V_{IN,AC}$ = 90Vac $P_O = P_{O,maxFA}$	T1	-	-	2	Sec
Power OK Delay	$V_{IN,AC}$ = 115Vac $P_O = P_{O,maxFA}$	T2	100	-	500	mSec
Power Fail Delay	$V_{IN,AC}$ = 115Vac $P_O = P_{O,maxFA}$	T3	6	-	-	mSec

POWER AND CONTROL SIGNAL DESCRIPTIONS

+Remote Sense, -Remote Sense (Remote Sensing) - (SK203 - Pin 3 and Pin 4)

The main output of the LPS100-M series power supply is equipped with a Remote Sensing capability that will compensate for a voltage drop of up to a 0.5V between the output terminals of the supply and the sensed voltage point (load). This feature is implemented by connecting the Vo +Remote Sense (pin 4) and the Vo –Remote Sense (pin 3) terminals to the positive and negative rails of the main output, respectively, at a location that is near to the load. Care should be taken in the routing of the sense lines as any noise sources or additional filtering components introduced into the voltage rail may affect the stability of the power supply. The LPS100-M series power supply will operate appropriately without the sense lines connected; however it is recommended that the sense lines be connected directly to the main output terminals if remote sensing is not required.

The power supply is protected against damage caused by inadvertent reverse connection of the Remote Sense lines.

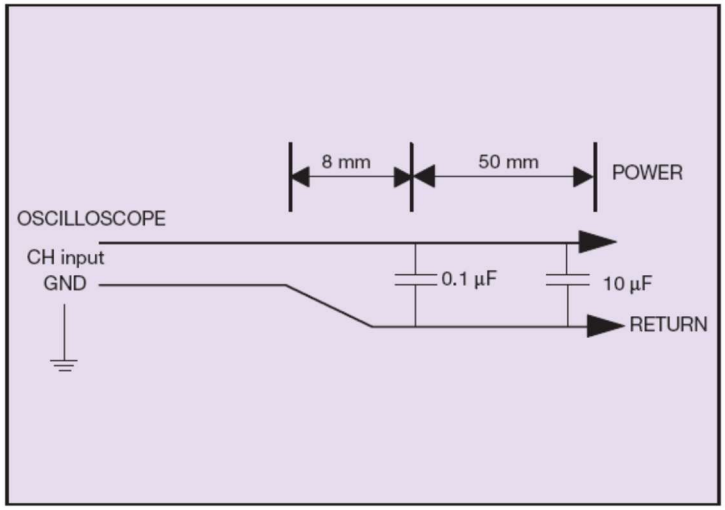
Remote sensing has no effect on the +12V V_{FAN} output.

Note - The maximum output voltage of the LPS100-M series power supply is limited to +10% above the nominal setting, trimming the main output above the nominal may limit the maximum amount of voltage sense compensation.

APPLICATION NOTES

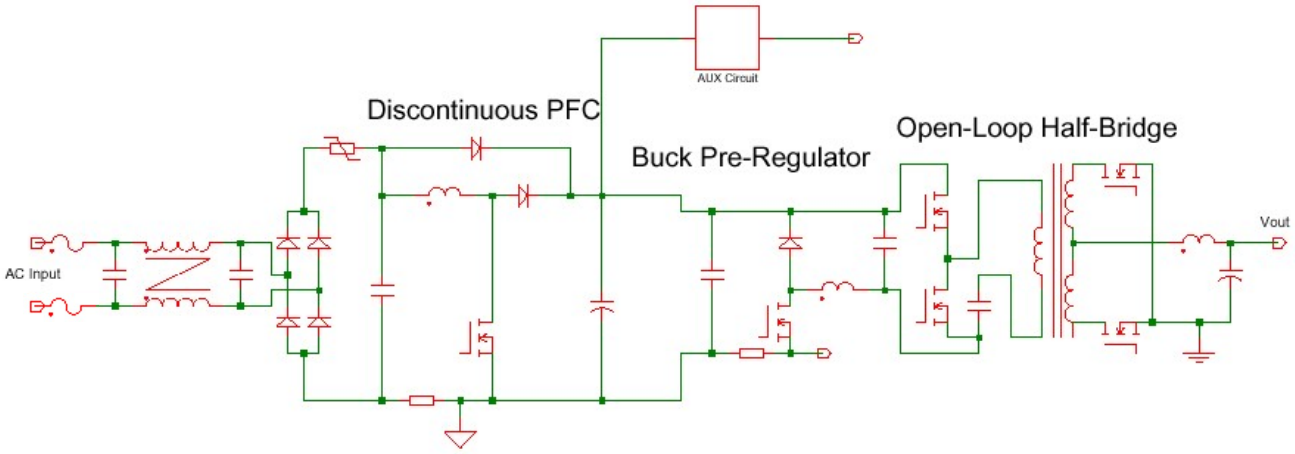
Output Ripple and Noise Measurement

The setup outlined in the diagram below has been used for output voltage ripple and noise measurements on the LPS100-M series. When measuring output ripple and noise, a scope jack in parallel with a 0.1uF ceramic chip capacitor, and a 10 uF aluminum electrolytic capacitor should be used. Oscilloscope should be set to 20 MHz bandwidth for this measurement.



Block Diagram

Below is the block diagram of the LPS100-M series power supply.



RECORD OF REVISION AND CHANGES

Issue	Date	Description	Originators
1.5	03.25.2013	Add LPS109 performance	K. Wang
1.6	04.08.2020	Remove setting time spec	K. Wang
1.7	06.18.2020	Update safety to 62368-1	A. Zhang
1.8	05.11.2022	Add UKCA mark, update block diagram and some format	A. Zhang

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

Our products enable customer innovation in complex applications for a wide range of industries including semiconductor equipment, industrial, manufacturing, telecommunications, data center computing, and medical. With deep applications know-how and responsive service and support across the globe, we build collaborative partnerships to meet rapid technological developments, propel growth for our customers, and innovate the future of power.
