

# ESP32-PICO-V3-ZERO

Datasheet Version 1.5

Alexa Connect Kit (ACK) module with an Espressif chipset

2.4 GHz Wi-Fi + Bluetooth® + Bluetooth LE support

Built around ESP32 series of SiP, Xtensa® dual-core 32-bit LX6 microprocessor

4 MB flash available

On-board PCB antenna with an RF test connector

ESP32-PICO-V3-ZERO

ESPRESSIF

microprocessor. The module integrates a 4 MB SPI flash.

**Table 1: ESP32-PICO-V3-ZERO Series Comparison**

Ordering Code	Flash	Ambient Temp. <sup>1</sup> (°C)	Embedded Chip Revision	Size <sup>2</sup> (mm)
ESP32-PICO-V3-ZERO	4 MB (Quad SPI) <sup>3</sup>	–40 ~ 85	v3.0/v3.1	16 × 23 × 2.3

<sup>1</sup> Ambient temperature specifies the recommended temperature range of the environment immediately outside the Espressif module.

<sup>2</sup> For details, refer to Section 9 [Module Dimensions](#).

<sup>3</sup> The in-package flash supports:

- More than 100,000 program/erase cycles
- More than 20 years data retention time

At the core of this module is the ESP32 chip, which is a single 2.4 GHz Wi-Fi and Bluetooth combo chip designed with TSMC's 40 nm low-power technology. ESP32-PICO-V3-ZERO integrates all peripheral components seamlessly, including a crystal oscillator, flash, filter capacitors and RF matching links in one single package. Module assembly and testing are already done at SiP level. As such, ESP32-PICO-V3-ZERO reduces the complexity of supply chain and improves control efficiency. It is ultra-small in size, with robust performance and low energy consumption.

ESP32-PICO-V3-ZERO is a module for Alexa Connect Kit (ACK), a managed service that makes it easy to integrate Alexa into your products. With ESP32-PICO-V3-ZERO and its default firmware, you can connect your devices

5.2.8</		

### 4.3 UOTXD Printing Control

During booting, the strapping pin MTDO can be used to control the UOTXD Printing, as Table 6 shows.

Table 6: UOTXD Printing Control

UOTXD Printing Control	MTDO
<b>Enabled</b> <sup>1</sup>	<b>1</b>
Disabled	0

<sup>1</sup> **Bold** marks the default value and configuration.

### 4.4 Timing Control of SDIO Slave

The strapping pin MTDO and GPIO5 can be used to control the timing of SDIO slave, see Table 7 *Timing Control of SDIO Slave*.

Table 7: Timing Control of SDIO Slave

Edge behavior	MTDO	GPIO5
Falling edge sampling, falling edge output	0	0
Falling edge sampling, rising edge output	0	1
Rising edge sampling, falling edge output	1	0
<b>Rising edge sampling, rising edge output</b>	<b>1</b>	<b>1</b>

<sup>1</sup> **Bold** marks the default value and configuration.
