1) In case of lower frequency, the deterioration of the display quality, flicker etc., may occur.
2) If CK is fixed to "H" or "L" level for certain period while ENAB is supplied, the panel may be damaged.
3) Please adjust LCD operating signal timing and CFL driving frequency, to optimize the display quality. There is a possibility that flicker is observed by the interference of LCD operating signal timing and CFL driving condition (especially driving frequency), even if the condition satisfies above timing specification.
4) Do not make Tv, Th, and Thp fluctuate.
5) CK count of each Horizontal Scanning Time should be always the same. Vertical invalid data period should be "n" X "Horizontal Scanning Time" . (n: integer) Frame period should be always the same.

1) For each "AN-CA"
2) When brightness decrease 50% of minimum brightness.
   The average life of a LED will decrease when the LCD is operating at higher temperatures.
3) Life time is estimated data(Condition : IF=(60)mA, Ta=25 in chamber).
4) An input current below (TBD)mA may reduce the brightness uniformity of the LED backlight.
   This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully
   before finalizing the input current.

10. Design guidance for analog touch panel

10-1. Electrical (In customer's design, please remember the following considerations.)
   1) Do not use the current regulated circuit.
   2) Keep the current limit with top and bottom layer.
      (Please refer to "Electrical absolute maximum ratings" for details.)
   3) Analog touch panel can not sense two points touching separately.
   4) A contact resistance is appeared at the touch point between top and bottom layer.
      After this resistance has stable read of the touch panel position data.
   5) Because noise of inverter or peripheral circuits may interfere signal of touch panel itself
      it is necessary to design carefully in advance to avoid these noise problem.

10-2. Software
   1) Do the "User Calibration".
   2) "User Calibration" may be needed with long term using.
      Include "User Calibration" menu in your software.
   3) When drawing a line with a stylus, there may be a slight discontinuity when the stylus
      passes over a spacer-dot. If necessary, please provide a compensation feature within your
      software.

10-3. Mounting on display and housing bezel
   1) Do not use an adhesive tape to bond it on the front of touch panel and hang it to the housing
      bezel.
   2) Never expand the touch panel top layer (PET-film) like a balloon by internal air pressure.
      The life of the touch panel will be extremely short.
   3) If a dew will be on the heat-sealed area or exposed traces at the end of a flexible tail,
      the migration of silver can occur. This will cause sometimes a short circuit.
   4) Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode
      damage of touch panel.

13. Precautions for use

13-1. Installation of the LCD
1) The LCD shall be installed so that there is no pressure on the LSI chips.
2) The LCD shall be installed flat, without twisting or bending.
3) Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.
   Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode damage of touch panel.

13-2. Static electricity
1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
2) Workers should use body grounding. Operator should wear ground straps.

13-3. LCD operation
1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.

13-4. Storage
1) The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
2) Always store the LCD so that it is free from external pressure onto it.

13-5. Usage
1) DO NOT store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
2) Do not push or rub the touch panel's surface with hard to sharp objects such as knives, orthe touch panel may be scratched.
3) When the touch panel is dirty, gently wipe the surface with a soft cloth, sometimes moistened by mild detergent or alcohol. If a hazardous chemical is dropped on the touch   panel by mistake, wipe it off right away to prevent human contact.
4) Touch panel edges are sharp. Handle the touch panel with enough care to prevent cuts.
5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
6) Do not pull the LED lead wires and do not bend the root of the wires. Housing should be designed to protect LED lead wires from external stress.
7) Do not disassemble LCD because it will result in damage.
8) This Kyocera LCD has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
9) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
10) Liquid crystal may leak when the LCD is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.
