

PF™

PEM® CAPTIVE PANEL SCREWS

PEM® captive hardware for
easy service access without
loose components.

PEM® brand captive panel screws are designed to help keep parts to a minimum and eliminate risks associated with loose hardware that could fall out and damage internal components. These panel fastener assemblies are ideal to attach metal panels or other thin material components in applications where subsequent access will be necessary.

Fastener drawings and models are available at www.pemnet.com.

Custom sizes are available on special order.

PEM® PF11™, PF12™, PF15™, PF11MF™, PF11MW™, And PEM® C.A.P.S.® Captive Panel Screws

- Available in three installation types; self-clinching, flare-mounted and floating
- All have the same profile or look above the sheet or panel
- Standard selection of knobs include knurled, semi-smooth or smooth metal caps and plastic PEM C.A.P.S.® (Colored Access Panel Screws)

Key Features Include:

- Shoulder on retainer to provide positive stop during installation.
- Anti cross-threading feature (designated with an "M" in the part number). Eases assembly, aligns components, improves assembly line productivity, prevents jamming, and slides through clogged internal threads.
- We offer a solution that is compliant with ATCA® specifications. Contact [Tech Support](#) for more information.

Shoulder on Retainer

Anti Cross-thread Technology - How it works

PennEngineering is a licensee for MATHread® technology, a registered trademark of MATHread Inc.

Standard Mounting Styles:

Self-clinching

- Installs flush on back side of panel.
- Available in three screw lengths.

Flare-mounted

- Appropriate for close centerline-to-edge applications.
- Doesn't require high installation force.
- Installs into any panel hardness.
- Installs flush on back side of panel.
- Can be installed into most any thin material.
- Appropriate for painted panels.

Flare-mounted, Floating

- Compensates for mating hole misalignment.
- Installs into any panel hardness.

Standard Cap Selection:

Knurled Metal Cap
All metal cap available with knurls.

Smooth Metal Cap
All metal cap available without knurls.

Semi-smooth Metal Cap
All metal cap available with partial knurls.

Black Metal Cap
DuraBlack™ finish is scratch resistant. Finish is on both metal cap and screw. (finish code "BL")

Plastic Cap
Available with custom color plastic cap. (See [page 8](#) for colors)

Available Drive Configurations:

Phillips/slot
(Standard -
except for plastic cap)

Phillips

- (1) The colors shown (except for black) are non-stocked standards and available on special order. Since actual color knob may vary slightly from those represented, we recommend that you request samples for color verification. If you require a custom color or you need a "color matched" knob, please contact us.
- (2) As with all Class 2A/6g external threads with an additive finish, the maximum major and pitch, after plating, may equal basic sizes and be gauged to Class 3A/4h, per ANSI B1.1, Section 8, Table 3A and ANSI B1.13M, Section 8, Paragraph 8.2.
- (3) Temperature limit is 210° F / 99° C.
- (4) For more information on proximity to bends and distance to other clinch hardware, see [PEM® Tech Sheet C/L To Edge](#).

Color Capabilities ⁽¹⁾

Choose a knob color code and add it to the end of the base part number.

Threads:

External, ASME B1.1, 2A / ASME B1.13M, 6g ⁽²⁾

Material:

Knob: PC/ABS (UL 94V-0, halogen-free) ⁽³⁾

Retainer: Hardened Carbon Steel

Screw: Hardened Carbon Steel

Spring: 300 Series Stainless Steel

Retaining Clip: 300 Series Stainless Steel

Finish:

Retainer: CN - Bright nickel over copper flash per ASTM B689, Type II

Screw: Zinc plated per ASTM B633, SC1 (5µm), Type III, colorless

Spring: Natural Finish

Retaining Clip: Natural Finish

For use in sheet hardness:

HRB 80 or less (Hardness Rockwell "B" Scale)

HB 150 or less (Hardness Brinell)

Part Number Designation

Also available with flare-mounted retainer as PF11PMF or with floating style retainer as PF11PMW.

PEM® PFHV™ Captive Panel Screws

- Compact, low profile design for limited access applications
- Low cost captive screw design to replace loose hardware
- Two screw lengths
- Universal slot/Phillips recess standard with available Torx® recess
- Available with MATHread® anti cross-thread technology. (See [page 4](#) for more information)

Installation Data [page 29](#). Performance Data [page 37](#).

Threads:

External, ASME B1.1, 2A / ASME B1.13M, 6g ⁽¹⁾

Material:

Retainer: Carbon Steel

Screw: Hardened Carbon Steel

Finish:

Retainer: CN - Bright nickel over copper flash per ASTM B689, Type II

Screw: CN - Bright nickel over copper flash ⁽¹⁾

For use in sheet hardness:

HRB 60 or less (Hardness Rockwell "B" Scale)

HB 107 or less (Hardness Brinell)

Part Number Designation

PFHV - 632 - 0 CN

PEM® PF7M™ And PF7MF™ Captive Panel Screws

- Smallest footprint, spring-loaded panel fastener for limited access applications
- MATHread® anti cross-thread technology (See [page 4](#) for more information)
- Installs flush on back side of panel
- Available with Torx® recess
- PF7M Self-clinching style provides high pushout resistance
- PF7M does not require special hole preparation
- PF7MF is appropriate for close centerline-to-edge applications
- PF7MF does not require high installation force
- PF7MF installs into any panel hardness

PF7M

PF7MF

PF7M™ Self-Clinching Captive Panel Screws

Patented.
#D656,392S

Dimples on head designate metric thread.

Phillips driver size.
(See chart)

Shoulder provides positive stop during installation.

Clinching profile may vary.

PEM® PF30™, PF50™ And PF60™ Captive Panel Screws

- Low-profile design satisfies many functional and cosmetic requirements
- Convenient large head for tool or hand operation
- PF50/PF60 are available with Torx® recess
- PF50/PF60 are available with MATHread® anti cross-thread technology. (See [page 4](#) for more information)

PF30™ Low-Profile Captive Panel Screws

Available with DuraBlack™ finish (Finish Code "BN")

Shoulder provides positive stop during installation.

- (1) As with all Class 2A/6g external threads with an additive finish, the maximum major and pitch, after plating, may equal basic sizes and be gauged to Class 3A/4h, per ANSI B1.1, Section 8, Table 3A and ANSI B1.13M, Section 8, Paragraph 8.2.
- (2) For more information on proximity to bends and distance to other clinch hardware, see [PEM® Tech Sheet C/L To Edge](#).

Threads:

External, ASME

PFC4™ And PFC2P™ Captive Panel Screws

- Fully concealed-head for tool only access
- Comply with UL 60950 standards
- Available with MATHread® anti cross-thread technology (See [page 4](#) for more information)
- Available with Torx® recess
- PFC4 installs into stainless steel sheets HRB 88 or less

PFC4™ Recessed-Head Captive Panel Screws

Threads:

External, ASME B1.1, 2A / ASME B1.13M, 6g

Material:

Retainer: 400 Series Stainless Steel
Screw: 400 Series Stainless Steel
Spring: 300 Series Stainless Steel
Retaining Ring: Nylon, temperature limit 200° F / 93° C

Finish:

Retainer: Passivated and/or tested per ASTM A380
Screw: Passivated and/or tested per ASTM A380
Spring: Natural Finish

For use in sheet hardness:

HRB 88 or less (Hardness Rockwell "B" Scale)
HB 183 or less (Hardness Brinell)

Part Number Designation

PFC4 - 832 - 50

A Note About Fasteners For Stainless Steel Panels

In order for self-clinching fasteners to work properly, the fastener must be harder than the sheet into which it is being installed. In the case of stainless steel panels, fasteners made from 300 Series Stainless Steel do not meet this hardness criteria. It is for this reason that 400 series fasteners are offered (PFC4). However, while these 400 Series fasteners install and perform well in 300 Series stainless sheets they should not be used if the end product:

- Will be exposed to any appreciable corrosive presence.
- Requires non-magnetic fasteners.
- Will be exposed to any temperatures above 300° F (149° C)

If any of the these are issues, please contact techsupport@pemnet.com for other options.

PFC2P™ Recessed-Head Captive Panel Screws

Available with
DuraBlack™ finish
(Finish Code "BN")

Clinching profile may vary.

PTL2™ And PSL2™ Spring-Loaded Plunger Assemblies

- Positioning pins for sliding components such as drawer slides and equipment consoles
- Fast installation and removal of components
- Reverse side of sheet is flush when plunger is retracted
- PTL2 has quick lockout feature to hold plunger in fully retracted position (Available as PSL2 without lockout feature on special order)
- For use in sheets of HRB 80 or less

PTL2/PSL2 installed and with mating panel. Minimum mating hole diameter .251" / 6.38 mm.

Lockout feature holds plunger in retracted position. Simply retract and twist to engage lockout feature.

Shoulder provides positive stop during installation.

Clinching profile may vary.

- (1) As with all Class 2A/6g external threads with an additive finish, the maximum major and pitch, after plating, may equal basic sizes and be gauged to Class 3A/4h, per ANSI B1.1, Section 8, Table 3A and ANSI B1.13M, Section 8, Paragraph 8.2.
- (2) For more information on proximity to bends and distance to other clinch hardware, see [PEM® Tech Sheet C/L To Edge](#).

PEM® HSCB™ Heat Sink Mounting System

The HSCB™ engineered mounting system provides secure attachment of a heat sink to the circuit board while providing firm contact to the chip component allowing optimum heat dissipation. The three-piece fastening system, sold individually, includes the screw, spring and receptacle nut. The clamp load created is determined by the spring rate and the amount of deflection that is designed into the joint of the hardware. The system also allows for slight expansion and contraction of the joint components without stress to the delicate circuitry. The unique “click” feature lets the user know when the fastener is completely installed.

- Screw can not be overtightened. Audible “click” when fully engaged.
- Screw and spring mount together permanently into the heat sink.
- Spring determines clamp force.
- Receptacle nut mounts permanently to the PC board.
- Provides even, constant contact of heat sink to chip component.
- Allows removal of heat sink if desired.

To select proper length code of nut/standoff:

- 1) Determine “G”, the distance from the top surface of the heat sink to the top of the P.C. Board.
- 2) Find the combination of Screw (HSCB) and Nut (HSR) whose sum of Screw Factor (SF) plus Nut Factor (NF) are closest to G.
- 3) Find $D = G - SF - NF$. The D value must be a negative number between zero and 1mm or 1/32” (1 dash length of HSR nut).
- 4) The actual working load is equal to the Spring (HSL) Working Load + (D x spring rate k). Lower D value results in lower force.

If this or any standard product does not meet your application needs, contact our PEM Technical Support group at techsupport@pemnet.com to develop a special product that matches your specific application.

HSL™ Springs

HSL springs are engineered to provide a reliable and repeatable spring rate when assembled with mating PEM hardware. The spring rate is critical to the successful assembly of your heat sink. Clamp load will be determined by the spring rate and deflection that is designed into the joint.

Part Number	Minimum Inside Dia.		Load at Working Height ±10%		Working Height Ref.		Spring Rate k		Spring Material
	(in.)	(mm)	(lbs.)	(N)	(in.)	(mm)	(lb/in)	(N/mm)	
HSL-574-35	.226	5.74	7.87	35	.270	6.86	74	12.96	17-7 Stainless Steel, Natural Finish
HSL-701-35	.276	7.01	7.87	35	.270	6.86	39	6.84	17-7 Stainless Steel, Natural Finish

NOTE: HSCB screws, HSR nuts and HSL springs are sold separately. HSL-574-35 spring fits screw thread sizes #4-40 and M3 and HSL-701-35 spring fits screw thread size #6-32.

The HSL Inside Diameter Code is expressed in hundredths of millimeters. Example "574" indicates a minimum inside diameter of 5.74mm or .226".

The HSL Load Code is expressed in Newtons developed at the working height of the spring once the joint is assembled. Example "35" indicates working load of 35 Newtons, or approximately 8 lbs.

For designs requiring a specific spring rate, contact our PEM Technical Support group at techsupport@pemnet.com

PEM® PF10™ Flush-Mounted Captive Panel Screws

- PF10 assembly sits flush in sheets as thin as .050" / 1.27 mm or flush on both sides in .125" / 3.2 mm sheets
- PS10 screw remains captive in retainer when disengaged
- PR10 retainer and F10 receptacle nut is for use in sheets of HRB 70 or less
- N10 nut is for use in sheets of HRB 80 or less
- Complies with UL 60950 standards

Value-Added Capabilities

ATCA Solutions

Use PF11PM captive panel screw and TPXS pin in conjunction to satisfy the requirements of the PICMG 3.0 of the Advanced TCA®.

Tight Seal Solutions

Consider adding an o-ring to our PEM C.A.P.S.® captive panel screw. When fastened, it provides a tight seal above the panel.

Nylon Locking Patch

Nylon locking patch is available to be added to any of PEM captive panel screws for applications requiring a locking element.

Thread-forming Opportunity

PennEngineering is official licensee for REMFORM®, TAPTITE®, PT®, and DELTA PT® fastener products.

REMFORM® and TAPTITE® are trademarks of REMINC®. PT® and DELTA PT® are trademarks of EJOT®.

MAThread® Anti Cross-thread Technology

PennEngineering is a licensee of MAThread® Anti Cross-Threading Technology. This unique design allows the threads to self-align and drive easily with reduced effort. This helps speed assembly, reduce or eliminate failures, repairs, scrap, downtime, and warranty service associated with thread damage. This option is available on most types of PEM captive panel screws.

Anti Cross-Thread Feature

MAThread® is a registered trademark of MAThread inc.

Captive Panel Screw Installation

PF11™/PF12™/PF15™/PF11M™/PF12M™/PF15M™/PEM C.A.P.S.® Fasteners

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into recessed anvil, and place workpiece (preferably the punch side) over shank of fastener.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the shoulder of the retainer comes in contact with the sheet material.

(1) Punches and anvils should be hardened.

PF11MF™/PF12MF™ Fasteners (Flare-Mount Installation)

1. Prepare properly sized mounting hole in sheet with countersink.
2. Place fastener into recessed anvil, and place workpiece over shank of fastener.
3. With installation punch and anvil surfaces parallel, apply squeezing force to flare the retainer of the fastener.

PFC4™ Fasteners

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into recessed anvil, and place workpiece (preferably the punch side) over shank of fastener.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the shoulder of the retainer comes in contact with the sheet material.

Installation Requirements

1. Sheet hardness must be less than 88 on the Rockwell "B" scale.
2. Hole punch should be kept sharp to minimize work hardening around hole.
3. Fastener should be installed in punch side of hole.
4. Fastener should not be installed near bends or other highly cold worked areas where sheet hardness may be greater than 88 on the Rockwell "B" scale.

PFK™ Fasteners

1. Prepare properly sized mounting hole in board.
2. Place fastener into recessed anvil, and place workpiece over shank of fastener.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the shoulder of the retainer comes in contact with the board.

PEMSERTER® Installation Tooling⁽¹⁾⁽²⁾

Unified	Thread Code	PEMSERTER® Part Number		Anvil Dimensions (in.)	
		Anvil	Punch	A ±.002	C ±.002
	440	975200026	975200060	.320	.323
	632	975200027	975200061	.320	.358

Metric	Type	PEMSERTER® Part Number		Anvil Dimensions (mm)	
		Anvil	Punch	A ±0.05	C ±0.05
	M3	975200026	970200060	8.13	8.2

(1) Punches and anvils should be hardened.

(2) [Click here](#) for a quote on Haeger® custom installation tooling.

SCBR™ Fasteners

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring. If the hole is punched, be sure to install fastener into punched side of hole.
2. Assemble spring on screw by rotating spring counter clockwise and position assembly into recessed magnetic punch.
3. Position hole in workpiece over retractable anvil pin.
4. With installation punch and anvil surfaces parallel, apply squeezing force on top of the screw head and the underside of the sheet material. The squeezing action forces the displacer of the screw into the sheet, causing it to reduce the mounting hole diameter and captivate the screw.

Installation Tooling⁽¹⁾⁽³⁾

Unified	Thread Code	PEMSERTER® Part Number		Installation Tooling Dimensions (in.)		
		Anvil	Magnetic Punch (2)	C	J	K
	440	970200048300	8016210	.113 - .116	.354 - .357	.035

 (2) Pneumatic punch may also be used. Please [contact us](#) for punch part numbers.
 (3) [Click here](#) for a quote on Haeger® custom installation tooling.

SCB™/SCBJ™ Fasteners

1. Prepare properly sized mounting hole in sheet.
2. Place the fastener through mounting hole and into anvil. A flat or recessed punch can be used.
3. With installation punch and anvil surfaces parallel, apply squeezing force to the top of the screw head and the underside of the sheet material. The squeezing action forces the shoulder of the screw into the sheet, displacing sheet material, causing it to fill the void under the head and shoulder of the screw.

Installation Tooling⁽¹⁾⁽²⁾

Unified	Thread Code	Installation Tooling Dimensions (in.)		
		C	E	H
	440	.113 - .116	.270 - .280	.073 - .074

HSCB™ Fastener Into Heat Sink

1. Prepare properly sized mounting hole in heat sink. Do not perform any secondary operations such as deburring. If the hole is punched, be sure to install the fastener into the punch side of the hole.
2. Place the head of the screw into the recess of the installation anvil and position assembly into recessed magnetic punch.
3. Place the spring over the shoulder of the screw, maintaining concentricity.
4. Position the heat sink mounting hole over the screw.
5. Bring the heat sink down over the screw and onto the shoulder of the screw.
6. With installation punch and anvil surfaces parallel, apply a squeezing force to the heat sink and the head of the screw. The squeezing action forces the displacer of the screw into the heat sink, causing it to reduce the mounting hole diameter and captivate the screw and spring.

Installation Tooling⁽¹⁾⁽²⁾

Unified	Thread Code	PEMSERTER® Part Number		Installation Tooling Dimensions (in.)

HSR™ Nut/Standoff

1. Prepare properly sized mounting hole in board.
2. Place fastener into the anvil hole and place the mounting hole over the shank of the fastener as shown in drawing.
3. With installation punch and anvil surfaces parallel, apply squeezing force until shoulder contacts the board.

Installation Tooling⁽¹⁾⁽²⁾

Unified	Thread Code	PEMSERTER® Part Number		Installation Tooling Dimensions (in.)

Final Assembly

Once the screw and spring are captivated, assemble the heat sink to the circuit board by tightening the screw into the receptacle nut or standoff until the audible "click" is heard. The screw will continue to rotate, but will no longer be engaged in the threads or continue to actively tighten.

PR10™ Fasteners

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into the mounting hole.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the retainer is flush in the sheet.

N10™ Fasteners

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into recessed anvil, and place workpiece (preferably the punch side) over shank of fastener.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the shoulder of the nut comes in contact with the sheet material.

(1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.

	HSCB	M3	8	265	12	355

HSR™ Fasteners

Unified	Type	Thread Code	Test Sheet Material	
			.060" FR-4 Panel	
			Installation (lbs.)	Pushout (lbs.)
	HSR	440	400	65
	HSR	632	500	80

Metric	Type	Thread Code	Test Sheet Material	
			1.5mm FR-4 Panel	
			Installation (kN)	Pushout (N)
	HSR	M3	2.2	290

- (1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.
- (2) Torque values shown will produce a preload of 70% minimum tensile (125 ksi / 935 MPa) with nut factor "k" equal to .1

Captive Panel Screw Performance Data⁽¹⁾

PR10™ Fasteners

			FR-4 Fiberglass	
			Installation (kN)	Pushout (N)
	PFK			
		M3	1.1	245

- (1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.
- (2) With lead-free paste. Average values of 30 test points. The data presented here is for general comparison purposes only. Actual performance is dependent upon application variables. We will be happy to provide samples for you to install. If required, we can also test your installed hardware and provide you with the performance data specific to your application.
- (3) Torque values shown will produce a preload of 70% minimum tensile with a nut factor "k" equal to .1.
- (4) Failure occurred at the solder joint.

Captive Panel Screw Capabilities

Most Commonly Used And Recommended Captive Mating Hardware For Use With Captive Panel Screws

Self-Clinching Nuts Mated With Captive Panel Screw (See PEM® [CL Datasheet](#))

- S/CLS/SS/CLSS provide load-bearing threads in thin sheets with high pushout and torque-out resistance.
- SP nuts provide load-bearing threads in stainless steel sheets with a hardness of HRB 90 (Rockwell "B" scale) / HB 192 (Hardness Brinell) or less.
- CLA aluminum nuts are recommended for aluminum sheets with a hardness of HRB 50 (Rockwell "B" scale) / HB 89 (Hardness Brinell) or less.
- SMPS nuts are for installation into ultra-thin sheets and can be mounted closer to the edge of a sheet than other self-clinching nuts.
- SL nuts have a unique TRI-DENT® locking feature which meets demanding locking performance requirements.

As/Ac/A4 Floating Nuts Mated With Captive Panel Screw (See PEM® [ALA Datasheet](#))

- AS (carbon steel) and AC (300 series stainless steel) floating nuts install into sheets with hardness up to HRB 70 / HB 125 on the Rockwell "B" scale.
- A4 (400 series stainless steel) floating nuts install into sheets with hardness up to HRB 88 / HB 183 on the Rockwell "B" scale.
- Thread locking versions also available.

B/Bs Blind Nuts Mated With Captive Panel Screw (See PEM® [B Datasheet](#))

- B/BS nuts are used in applications requiring closed thread ends.
- Provides barrier to protect threads against foreign matter.
- Protects internal components from intrusion of screws.

F Flush Nuts Mated With Captive Panel Screw (See PEM® [F Datasheet](#))

- Designed to be completely flush in sheets as thin as .060"/1.5mm.
- Ideal for applications where a thin sheet requires load-bearing threads but still must remain smooth, with no protrusions on either surface.
- The hexagonal head ensures high axial and torsional strength.
- F nuts can be ordered to conform to US NASM45938/4 specifications.

Pc Board Nuts Mated With Captive Panel Screw (See PEM® [K Datasheet](#))

- KF2/KFS2 broaching nuts utilize specially formed axially grooves that can be mounted into a hole to provide a permanent, strong, threaded attachment point in PC boards.
- SMTSO surface mount nuts also available.

For the best mating hardware for your application please contact our [Tech Support](#) line or your local representative.
