

Linear Regulator – Wide Input Voltage Range, Ultra-Low Iq, High PSRR, Adjustable Output Voltage

5 mA

NCP786L

The NCP786L is high-performance linear regulator, offering a very wide operating input voltage range of up to 450 V DC, with an output current of up to 5 mA. Ideal for high input voltage applications such as industrial and home metering, home appliances. The NCP786L family offers $\pm 5\%$ initial accuracy, extremely high-power supply rejection ratio and ultra-low quiescent current. The NCP786L family is optimized for high-voltage line and load transients, making them ideal for harsh environment applications. The output voltage can be set by resistor divider in range from 1.27 V up to 15 V. SOT-223 Pb-free package with high allowable power dissipation keep small footprint at space sensitive applications.

Features

- Wide Input Voltage Range:
DC: Up to 450 V
AC: 85 V to 260 V (half-wave rectifier and 2.2 μ F capacitor)
- 5 mA Guaranteed Output Current
- Ultra Low Quiescent Current: Typ. 10 μ A ($V_{OUT} \leq 15$ V)
- $\pm 5\%$ Accuracy Over Full Load, Line and Temperature Variations
- Ultra-high PSRR: 70 dB at 60 Hz, 90 dB at 100 kHz
- Stable with Ceramic Output Capacitor 2.2 μ F MLCC
- Thermal Shutdown and Current Limit Protection
- Available in Thermally Enhanced SOT-223 Package
- This is a Pb-Free Device

Typical Applications

- Industrial Applications, Home Appliances
- Home Metering / Network Application
- Off-line Power Supplies

APPLICATION INFORMATION

The typical application circuit for the NCP786L device is shown below.

Figure 7. Typical Application Schematic

Input Decoupling (C1)

A 1.0 μF capacitor either ceramic or electrolytic is recommended and should be connected close to the input pin of NCP786L. Higher value 2.2 μF is necessary to keep the input voltage above the required minimum input voltage at full load for AC voltage as low as 85 V with half wave rectifier. The capacitor 1 μF could be acceptable for DC input voltage from 55 V up to 450 V or AC input voltage 235 V $\pm 20\%$. There must be assured minimum Input Voltage more than 55 V at input pin of NCP786L regulator in order to keep stable desired output voltage with guaranteed parameters at AC supply.

Output Decoupling (C2)

The NCP786L Regulator does not require any specific Equivalent Series Resistance (ESR). Thus capacitors exhibiting ESRs ranging from a few $\text{m}\Omega$ up to 0.5 Ω can be used safely. The minimum decoupling value is 2.2 μF . The regulator accepts ceramic chip capacitors as well as tantalum devices or low ESR electrolytic capacitors. Larger values improve noise rejection and especially load transient response.

Layout Recommendations

Please be sure that the V_{IN} and GND lines are sufficiently wide. When the impedance of these lines is high, there is a chance to pick up a noise or to cause the malfunction of regulator by induced parasitic signal.

Set external components, especially the output capacitor, as close as possible to the circuit, and make leads as short as possible.

Thermal

As power across the NCP786L increases, it might become necessary to provide some thermal relief. The maximum power dissipation supported by the device is dependent upon board design layout and used package. Mounting pad configuration on the PCB, the board material, and also the ambient temperature affect the rate of temperature rise for the part. This is stating that when the NCP786L has good thermal conductivity through the PCB, the junction temperature will be relatively low with high power dissipation applications.

NCP786L

Output Voltage

The output voltage can be set by using a resistor divider as shown in Figure 1 with a range of 1.27 to 15 V. The appropriate resistor divider can be found by solving the equation below.

$$V_{OUT} = 1.27 \times \left(1 + \frac{R1}{R2}\right) + (I_{ADJ} \times R1) \quad (\text{eq. 1})$$

The recommended current through the resistor divider is from 1 μ A to 3 μ A in order to keep negligible ADJ pin consumption. In this case we can simplify the Equation 1 to:

$$V_{OUT} = 1.27 \times \left(1 + \frac{R1}{R2}\right) \quad (\text{eq. 2})$$
