Notes:

- Referenced ambient temperature 25°C
- Test Condition: 100 kHz, 0.1 Vrms
- Saturation Current - Isat (typ): DC current (A) that will cause L0 to drop approximately 30%
Isat (max): DC current (A) that will cause L0 to drop 30% max
Temperature Rise Current - Irms (typ): DC current (A) that will cause an approximate ΔT of 40°C
Irms (max): DC current (A) that will cause an approximate ΔT of 40°C max
- Operating temperature range includes self-temperature rise

PART NUMBER KEY

F2D2 - 2012 - XXX XX

Type / Product Series

F2D2-2012 = High Current Power Inductors

Inductance *

1R0 = 1.0 μH

C = Coating

Inductance Tolerance

M = ±20%

* Note: Inductance expressed by three figures. The unit is micro henry (μH). The first and second figures are significant digits, the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R" (3R8 = 3.8 μH). In that case, all figures are significant digits.
