SKY13525-646LF: 0.4 to 2.7 GHz SP6T LTE Transmit/Receive Switch with MIPI RFFE Interface

Applications

- 2G/3G/4G multimode cellular tablets and handsets (LTE, UMTS, CDMA2000, EDGE)
- Embedded data cards

Features

- Broadband frequency range: 0.4 to 2.7 GHz
- Low insertion loss and high linearity
- High isolation: 20 dB up to 2.7 GHz
- External MIPI select pin
- Six linear TRX ports with isolation greater than 20 dB @ 2.7 GHz
- Small QFN (14-pin, 2 x 2 mm) package (MSL1, 260 °C per JEDEC J-STD-020)
- For RoHS and other product compliance information, see the Skyworks Certificate of Conformance

Figure 1. SKY13525-646LF Block Diagram

Description

The SKY13525-646LF is a single-pole, six-throw (SP6T) antenna switch with a Mobile Industry Processor Interface (MIPI).

Using advanced switching technologies, the SKY13525-646LF maintains low insertion loss and high isolation for both transmit and receive switching paths. The high linearity performance and low insertion loss achieved by the SKY13525-646LF makes it an ideal choice for UMTS, CDMA2000, EDGE, and LTE applications.

Depending on the logic applied to the decoder, the antenna pin is connected to one of six switched RF ports using a low insertion loss path, while the paths between the antenna pin and the other RF pins are in a high isolation state. Switching is controlled by the MIPI decoder. There is an external MIPI select pin that enables how the switch responds to power mode triggers. When this pin is grounded, the switch responds to any of the power mode triggers. When this pin is left open, the switch responds to individual power mode triggers. No external DC blocking capacitors are required on the RF paths as long as no DC voltage is applied.

The SKY13525-646LF is manufactured in a compact, 2 x 2 mm, 14-pin surface mount Quad Flat No-Lead (QFN) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.
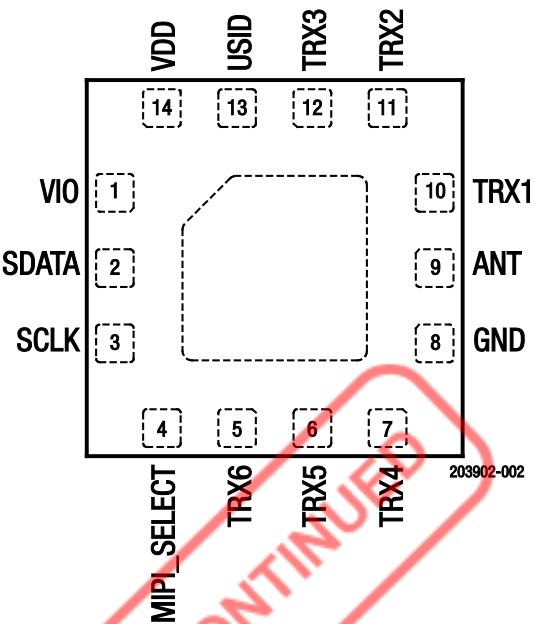

Figure 2. SKY13525-646LF Pinout
(Top View)

Table 1. SKY13525-646LF Signal Descriptions[1]

Pin	Name	Description	Pin	Name	Description
1	VIO	MIPI decoder interface/reference voltage	8	GND	Ground
2	SDATA	Data input/output	9	ANT	Antenna port
3	SCLK	Clock signal	10	TRX1	RF I/O path #1
4	MIPI_SELECT	MIPI interface select. When this pin is grounded, the switch responds to any of the power mode triggers. When this pin is left open, the switch is RFFE MIPI compliant and responds to individual power mode triggers.	11	TRX2	RF I/O path #2
5	TRX6	RF I/O path #6	12	TRX3	RF I/O path #3
6	TRX5	RF I/O path #5	13	USID	MIPI address pin used to select the device address. When this pin is grounded, the MIPI address is 1010. When this pin is tied to VIO, the MIPI address is 1011.
7	TRX4	RF I/O path #4	14	VDD	DC power supply

[1] Bottom ground paddles must be connected to ground.

Table 2. SKY13525-646LF Absolute Maximum Ratings[1]

Parameter	Symbol	Minimum	Maximum	Units
Power supply	V_{DD}	2.5	5.0	V
Digital control signal, MIPI select signal	V_{IO}		2	V
RF input power	P_{IN}		+34	dBm
Storage temperature	T_{STG}	−55	+150	°C
Operating temperature	T_{OP}	−30	+90	°C

[1] Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: *Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.*

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13525-646LF are provided in Table 2. Electrical specifications are provided in Tables 3 through 7.

IMD2 and IMD3 test conditions for various frequencies are listed in Tables 8 and 9, respectively.

Triple beat ratio (TBR) test conditions for bands 2 and 5 are listed in Table 10.

Figure 3 illustrates the test setup used to measure intermodulation products. This industry standardized test is used to simulate the WCDMA Band 1 linearity of the antenna switch. A +20 dBm Continuous Wave (CW) signal, f_{FUND}, is sequentially applied to the TRX1 through TRX5 ports, while a −15 dBm CW blocker signal, f_{BLK}, is applied to the ANT port.

The resulting third order intermodulation distortion (IMD3), f_{RX}, is measured over all phases of f_{FUND}. The SKY13525-646LF exhibits exceptional performance for all TRXx ports.

Table 11 describes the register content and programming read/write sequences. Refer to the *MIPI Alliance Specification for RF Front-End Control Interface (RFFE)*, v1.10 (26 July 2011) for additional information on MIPI programming sequences and MIPI bus specifications.

Figures 4 and 5 provide the timing diagrams for register write commands and read commands, respectively.

Table 12 provides the Register_0 logic. Table 13 describes the register parameters and bit values.

Table 3. SKY13525-646LF General Electrical Specifications[1]
(V_{DD} = 2.85 V, VIO = 1.8 V, T_{OP} = +25 °C, Characteristic Impedance [Z_0] = 50 Ω, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typ	Max	Units
Supply voltage	V_{DD}		2.50	2.85	4.80	V

Table 13. Register Description and Programming (2 of 2)

Register				
Name	**Address (Hex)**	**Parameter**	**Description**	**Default (Binary)**
PM_TRIG[1]	001C	PWR_MODE	Bits[7:6]: 00 = Normal operation (active) 01 = Default settings (startup) 10 = Low power (low power) 11 = Reserved	01
		Trigger_Mask_2	Bit[5]: If this bit is set, trigger 2 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 2, the data goes directly to the destination register.	0
		Trigger_Mask_1	Bit[4]: If this bit is set, trigger 1 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 1, the data goes directly to the destination register.	0
		Trigger_Mask_0	Bit[3]: If this bit is set, trigger 0 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 0, the data goes directly to the destination register.	0
		Trigger_2	Bit[2]: If this bit is set, data is loaded into the trigger 2 registers.	0
		Trigger_1	Bit[1]: If this bit is set, data is loaded into the trigger 1 registers (unsupported).	0
		Trigger_0	Bit[0]: If this bit is set, data is loaded into the trigger 0 registers (unsupported).	0
PRODUCT_ID	001D	PRODUCT_ID	Bits[7:0]: This is a read-only register. However, during the programming of the Unique Slave Identifier (USID), a write command sequence is performed on this register but the value is not changed.	11000000
MANUFACTURER_ID	001E	MANUFACTURER_ID	Bits[7:0]: Read-only register	10100101
MAN_USID	001F	Reserved	Bits[7:6]: Reserved	00
		MANUFACTURER_ID	Bits[5:4]: Read-only register	01

		USID	Bits[3:0]:
			
			Programmable USID. A write to these bits programs the USID:
			    With pin 13 = tied to VIO
			    With pin 13 = grounded
				1011
				1010

[1] Unlike the complete independence between triggers 0, 1, and 2, and also between the associated trigger masks 0, 1, and 2, respectively, as described in the MIPI RFFE Specification, this device uses additional interactions between the provided trigger functions.

The delayed application of updated data to all triggerable registers in this device may be accomplished using any of the three triggers (0, 1, or 2), provided that the particular trigger used is not currently masked off. If multiple triggers are enabled, any or all of those are sufficient to cause the data to be transferred from shadow registers to destination registers for all triggerable registers in the device.

It is also necessary to disable all three triggers (i.e., set all three trigger masks) to ensure that data written to any triggerable register will immediately be written to the destination register at the conclusion of the RFFE command sequence where the data is written.

Evaluation Board Description

The SKY13525-646LF Evaluation Board is used to test the performance of the SKY13525-646LF SP6T Switch. An Evaluation Board schematic diagram is provided in Figure 6. A recommended ESD protection circuit diagram is provided in Figure 7. An assembly drawing for the Evaluation Board is shown in Figure 8.

Package Dimensions

The PCB layout footprint for the SKY13525-646LF is provided in Figure 9. Typical part markings are shown in Figure 10. Package dimensions are shown in Figure 11, and tape and reel dimensions are provided in Figure 12.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13525-646LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
