BES LITE BES LITE SERIES

Battery Safety Electrolyte Detector

Compact Design | Highly Sensitive & Selective | Analog Three-State Output

DESCRIPTION

BES LITE is a cost-effective, low-profile, light-weight battery safety detector that uses Honeywell proprietary gas sensing technology to selectively detect battery electrolyte vapor, an indicator of thermal events. This provides an advanced warning of potential thermal runaway in Lithium-Ion battery packs.

BES LITE is designed to detect gases that are typically released during the initial phase of thermal runaway as well as throughout the entire thermal runaway process. This advanced detection capability facilitates the prompt identification of imminent dangers or risks, significantly enhancing safety measures in critical situations. Therefore, the sensor allows for proactive responses that can prevent loss of assets and protection of lives.

Early detection may vary based on factors such as the nature of cell abuse and its severity, state of charge, and other variables. BES LITE allows compliance with international regulations and guidance by providing a deterministic detection of thermal runaway events.

BES LITE is compatible with all lithiumion battery chemistries and cell types, making it versatile for use in industrial lithium-ion battery packs. Engineered to support a ten-year lifespan, it aligns with the typical operational life of industrial equipment. As concerns over lithium-ion battery safety continue to rise, BES LITE stands out as the ideal battery safety detector, ensuring the protection of both personnel and assets.

NOTE

Gas concentration at the sensor is affected by battery size, type, airflow path, and free volume. The BES LITE sensor was tested in a sealed 1000 mm × 742 mm × 240 mm battery pack with 30 L free volume. Further validation is recommended for different free volumes or battery pack sizes.

DIFFERENTIATION

- Early Thermal Runaway Detection:
 BES LITE is designed to detect gases commonly released during the initial phase of lithium-ion battery cell breakdown. This early detection allows for the timely implementation of safety mitigation actions, ensuring that appropriate measures can be taken to address potential hazards before they escalate
- Selective response to battery electrolyte vapor: BES LITE's selective response to battery electrolyte vapor significantly reduces the risk of false alarms, making it ideal for use in environments where interference gases may be present
- Efficient & safe design: BES LITE employs simple electronics for easy integration and minimal power consumption. Unlike other gas sensing technologies, it operates without an internal heating element, making it ideal for explosion-proof environments and applications requiring extended battery life
- Agnostic to Li-Ion chemistry & battery type: Works with various Li-ion battery types including prismatic, pouch & cylindrical, as well as different chemistries such as NMC, LFP, LTO, and more.

APPLICATIONS

Sealed and portable lithium-ion battery modules used in

- Battery Energy Storage Systems (BESS)
- UAM/UAV
- Micro-mobility
- Medical devices
- Light industrial goods

FEATURES

- Detects initial venting events before thermal runaway
- Provides early warning of thermal runaway events
- Selectively responds to electrolyte vapor
- Intrinsically safe with no internal heating element
- Inbuilt diagnostics functionality
- Low-profile, compact design
- Three-state analog output
- Customizable to specific application needs
- Compatible with all Lithium-ion battery chemistries and cell types
- Ten-year sensor life
- Resistant to common contaminants
- Highly resistant to siloxane poisoning
- Optimized for industrial applications

VALUE TO CUSTOMERS

- Enhanced asset protection: Battery electrolyte vapor detection enables early detection of thermal events, allowing enhanced asset protection
- Selective detection: Detects only electrolyte vapor. The selective response and high sensitivity to electrolyte vapor allows for the mitigation of false alarms
- Reliability in critical environments:
 Resistant to cross-gas interference &
 siloxane poisoning, ensuring reliable
 performance across demanding
 environments
- Ease of installation: The low-profile construction & mounting flanges enable installation even in tight spaces. The three-state output simplifies integration

BATTERY SAFETY ELECTROLYTE DETECTOR

TABLE 1. GENERAL SPECIFICATIONS		
Characteristic	Parameter	
Detection principle	Electrochemical sensing	
Dimensions W × L × H [mm]	31,8 × 23,5 × 9,9	
Startup time	1 second to valid output	
Response time ¹	< 2 seconds (typical)	
Detected media (Typical battery electrolytes)	Ethyl methyl carbonate (EMC) Dimethyl carbonate (DMC) Propylene carbonate (PC)	Diethyl carbonate (DEC) Ethylene carbonate (EC)
Operational life ²	10 years	
Storage life ³	3 years	

TABLE 2. ENVIRONMENTAL SPECIFICATIONS		
Characteristic	Parameter	
Operating temperature range	-20°C to 70°C [-4°F to 158°F]	
Storage temperature range	-40°C to 85°C [-40°F to 185°F]	
Humidity ⁴	10 %RH to 90 %RH (non-condensing)	
Ingress protection	IP30	
Vibration	Sine wave (logarithmic) sweep, 7 Hz to 200 Hz, 1 g to 8 g, 3 h per axis	
Shock	50 g, 11ms (all axes)	
EMC	As per AIS 004 Part 3	
ESD (unpowered)	±8 kV contact discharge (ISO 10605 - 2022) ±8 kV air discharge (ISO 10605 - 2022)	

TABLE 3. ELECTRICAL SPECIFICATIONS				
Characteristic	Minimum	Nominal	Maximum	Unit
Supply voltage	4.5	5.0	5.5	Vdc
Current consumption	-	_	3.0	mA
Output type	Three-state output ⁵			
Output (nominal)	2.00	2.50	3.00	Vdc
Device fault (diagnostics) or no power condition	-	0.0	<0.5	Vdc
Output for first vent event	4.25	-	5.00	Vdc

TABLE 4. INSTALLATION		
Characteristic	Parameter	
Device enclosure material	Acetal (POM)	
	Amphenol® connector P/N:10114830-11103LF (on device)	
Connector	Mating connector: Amphenol® P/N 10114826-X0X03LF	
	Crimp terminal P/N:10114827 (28 AWG)	
Weight	4.5 g	
Mounting	Two M3 screws with flat washers (recommended); installation torque ⁶ 0.45 Nm ±0.05 Nm	
	Recommended filter capacitor at output: $0.001~\mu F$ to $0.22~\mu F$	
Interface circuit recommendation	Minimum input impedance of load: 850 Kohms	
interrace circuit recommendation	Use of a buffer circuit to isolate the sensor output from input devices/circuits with low input impedance (less than 1 $\text{M}\Omega)$ is recommended	

¹ Response time – the time required for the device to detect a change in an input physical parameter or stimulus and provide a commensurate or predetermined change in output...

² At ambient operating conditions ranging from 25°C to 40°C.

 $^{^3}$ At storage conditions ranging from -10°C to 50°C.

⁴ Refer to Table 5 for the temperature-relative humidity combinations within the application boundary.

⁵ Three-State Output – The device provides a constant analog voltage output signal of 2.50 Vdc during normal operating condition. When a first vent event is detected, the output rails to high (5 Vdc). If the internal diagnostics detects a fault in the device, it produces a constant low (0 Vdc) output. Output is ratiometric to supply voltage; 10 % variation is applicable in all output conditions.

 $^{^{6}}$ WARNING – Do not over-torque. Tightening beyond the recommended torque value will damage the mounting flange.

△WARNINGPERSONAL INJURY

DO NOT USE these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.

Failure to comply with these instructions could result in death or serious injury.

△WARNINGMISUSE OF DOCUMENTATION

 The information presented in this product sheet is for reference only.
 Do not use this document as a product installation guide.

Failure to comply with these instructions could result in death or serious injury.

WARRANTY/REMEDY

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship during the applicable warranty period. The Honeywell standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgment or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items that Honeywell, in its sole discretion, finds defective. The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.

While Honeywell may provide information or engineering support for its products through Honeywell personnel, literature and website, it is the buyer's sole responsibility to determine the suitability of the Honeywell product(s) for the buyer's requirements

Specifications may change without notice. The information we supply is believed to be accurate as of this writing. However, Honeywell assumes no responsibility for its use.
