Broadband Silicon Capacitor BBSC 0201 22nF BV30

General description

BBSC Capacitor targets Optical communication system such as ROSA/TOSA, SONET and all optoelectronics as well as High speed data system or products. The BBSC is suitable for DC blocking, feedback, coupling and bypassing applications in all broadband optoelectronics and High-speed data system. The unique technology of integrated passive device in silicon, developed by Murata Integrated Passive, offers unique performances with low insertion loss, low reflection and phase stability from 73 KHz to 50 GHz+.

These capacitors in ultra-deep trenches in silicon have been developed in a semiconductor process, in order to integrate trench MOS capacitor providing high capacitance value of 22 nF (for kHz–MHz range) and high frequency MIM capacitors for low capacitance value for GHz range), both in a SMT 0201 [0.8 x 0.6 mm].

The BBSC capacitor provides very high stability of the capacitance over temperature, voltage variation as well as a very high reliability. BBSC capacitors have an extended operating temperature ranging from -55 to 150°C, with very low capacitance change over temperature (+70ppm/K).

<u>Assembly:</u> Suitable for surface mounted application on rigid PCB, ceramic substrate, FR4 (laminate) or flex platforms.

Finishing Bump finishing: ENIG

Copper pads optional for embedding version and SAC305 type 6 for pre-bumping version, as an optional finishing.

Key features

- Broadband performance to 50 GHz
- · Resonance free
- Phase stability
- Insertion low < 0.3dB Typ. up to 50 GHz
- Ultra-high stability of capacitance value:
 - Temperature 70ppm/K (-55 °C to +150 °C)
 - Voltage <-0.1%/Volt
 - Negligible capacitance loss through ageing
- Low profile: 400μm, 100 μm on request

- Break down voltage: 30V
- Low leakage current < 70pA
- High reliability
- High operating temperature (up to 150°C)
- Compatible with high temperature cycling during manufacturing operations (exceeding 300 °C)
- Compatible with EIA 0201 footprint

Key applications

- ROSA/TOSA
- SONET
- High speed digital logic

- Microwave/millimetre system
- High volumetric efficiency (i.e. capacitance per unit volume)
- Broadband test equipment

Pad Metallization

This surface mounted Silicon Capacitor is delivered as standard with ENIG (0.1 µm Au / 5 µm Ni) (Refer to Figure 6)

Other Metallization, such as SAC305 type 6 bumping (Refer to Figure 7). Copper, Thick Gold or Aluminum pads are possible on request.

Silicon dies are not sensitive to humidity, please refer to applications notes 'Assembly Notes' section 'Handling precautions and storage'.

Assembly

BBSC series is compatible with standard reflow technology.

It is recommended to design mirror pads on the PCB.

For further information, please see our mounting application note.

The attachment techniques recommended by Murata on the customer's substrates are fully detailed in specific documents available on our website. To assure the correct use and proper functioning of Murata capacitors please download the assembly instructions on https://www.murata.com/en-us/products/capacitor/siliconcapacitors and read them carefully.

Limiting values

Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those given in the Electrical performances sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.
