

NOTE: Please refer to the Altivar 12 User Manual (BBV28581) for complete installation and programming instructions.

ATV12H●●●●●

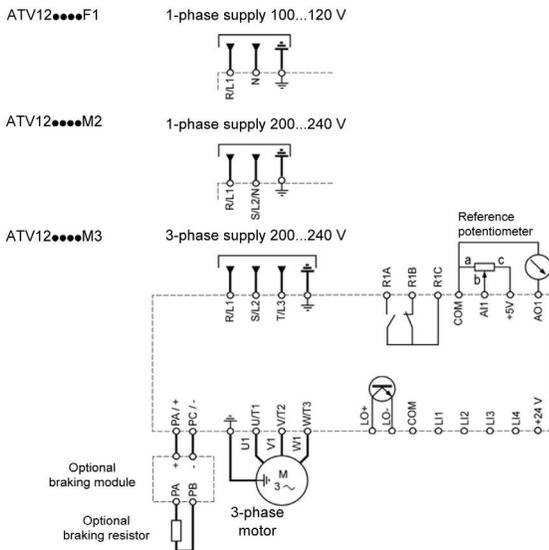

HMI DESCRIPTION

Functions of the display and keys

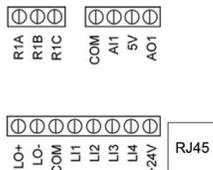

1. Value LED (a) (b).
2. Charge LED
3. Unit LED (c)
4. ESC button: Exits a menu or parameter, or aborts the displayed value to return to the previous value in the memory. In LOCAL configuration, 2 s press on ESC button switches between the control/programming modes.
5. STOP button: stops the motor (could be hidden by door if function disabled).
Note: See instructions for "RUN/STOP" cover removal.
6. RUN button: Starts running in LOCAL configuration and in REMOTE configuration if the function is configured (could be hidden by door if function disabled).
7. Jog dial
 - Acts as a potentiometer in LOCAL configuration and in REMOTE configuration if the function is configured.
 - For navigation when turned clockwise or counterclockwise – and selection / validation when pushed.
 This action is represented by this symbol
8. MODE button
 - Switches between the control/programming modes. 3s press on MODE button switches between the REMOTE/LOCAL configurations. The MODE button is only accessible with the HMI door open.
9. CONFIGURATION mode LED (b)
10. MONITORING mode LED 11. REFERENCE mode LED 12.
11. 4 x 7-segment displays

GENERAL WIRING DIAGRAM

Terminal	Function	For ATV12
□	Ground Terminal	All ratings
R/L1 – S/L2/N	Power Supply	1-phase 100...120 V
R/L1 – S/L2/N		1-phase 200...240 V
R/L1 – S/L2 – T/L3		3-phase 200...240 V
PA/+	+ output (dc) to the braking module DC Bus (visible part on wiring trap)	All ratings
PC/-	- output (dc) to the braking module DC Bus (visible part on wiring trap)	All ratings
PO	Not used	
U/T1 – V/T2 – W/T3	Outputs to the motor	All ratings

Note: In LOCAL configuration, the three LEDs 9, 10, 11 are blinking simultaneously in programming mode and are working as a Led chaser in control mode.
 (a) If illuminated, indicates that a value is displayed, for example, 0.5 is displayed for "0.5"
 (b) When changing a value the Configuration mode LED and the value LED are on steady.
 (c) If illuminated, indicates that a unit is displayed, for example, AMP is displayed for "Amps"

Terminal	Function	Electrical characteristics
R1A	NO contact of the relay	Min. switching capacity: • 5 mA for 24 V ~- Maximum switching capacity: • 2 A for 250 V ~ and for 30 V ~- on inductive load (cos φ = 0.4 and L/R = 7 ms) • 3 A for 250 V ~ and 4 A for 30 V ~- on resistive load (cos φ = 1 and L/R = 0) • response time: 30 ms maximum.
R1B	NC contact of the relay	
R1C	Common pin of the relay	
COM	Common of analog and logic I/Os	
AI1	Voltage or current analog input	• resolution: 10 bits • precision: ± 1% at 25°C (77°F) • linearity: ± 0.3% (of full scale) • sampling time: 20 ms ± 1 ms Analog voltage input 0 to +5 V or 0 to +10 V (maximum voltage 30 V) impedance: 30 kΩ Analog current input x to y mA, impedance: 250 Ω
5V	+5 VDC power supply for reference potentiometer	• precision: ± 5% • maximum current: 10 mA
A01	Voltage or current analog output (collector)	• resolution: 8 bits • precision: ± 1% at 25°C (77°F) • linearity: ± 0.3% (of full scale) • refresh time: 4 ms (maximum 7 ms) Analog voltage output: 0 to +10 V (maximum voltage +1%) • minimum output impedance: 470 Ω Analog current output: x to 20 mA • maximum output impedance: 800 Ω
LO+	Logic output	• voltage: 24 V (maximum 30 V) • impedance: 1 kΩ, maximum 10 mA (100 mA in open collector) • linearity: ± 1% • refresh time: 20 ms ± 1 ms.
LO-	Common of the logic output (emitter)	
L1 L2 L3 L4	Logic inputs	Programmable logic inputs • +24 VDC power supply (maximum 30 V) • impedance: 3.5 kΩ minimum • state: 0 if < 5 V, state 1 if > 11 V in positive logic • state: 1 if < 10 V, state 0 if > 16 V or switched off (not connected) in negative logic • sampling time: < 20 ms ± 1 ms.
+24V	+24 VDC supply provided by the drive	+24 VDC –15% +20% protected against short-circuits and overloads. Maximum customer current available 100 mA

rEF - Speed Reference Mode
