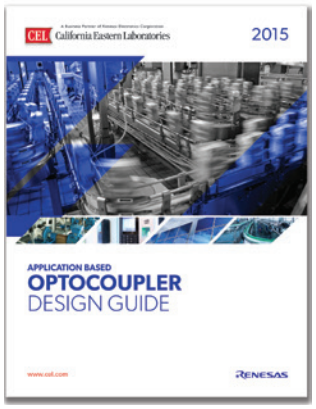
RENESAS

California Eastern Laboratories (CEL) is the exclusive sales and marketing partner in the Americas for Compound Semiconductor Devices from Renesas Electronics Corporation, formerly NEC Electronics Corporation. These products include RF components and RFICs, optocouplers, laser diodes and photo detectors.

Renesas Electronics optocouplers are used in a wide variety of markets including Consumer Electronics, Industrial, Power Supply, Test & Measurement, Datacomm, Lighting Control, Light Durable Goods and more. With over 50 years experience in customer support and fulfillment, CEL is ideally positioned to provide its customers with solutions tailored to meet their specific needs.

CEL maintains extensive inventories and provides engineering and applications assistance at its technical centers in Santa Clara, CA and Wauconda, IL. The company supports customers through sales offices, sales representatives and distributors in numerous locations.



Also available:

Our **Application Based Optocoupler Design Guide**, the most comprehensive tool for selecting the right Optocoupler to use in our focus applications. We have made selecting the right optocoupler as easy as 1-2-3.

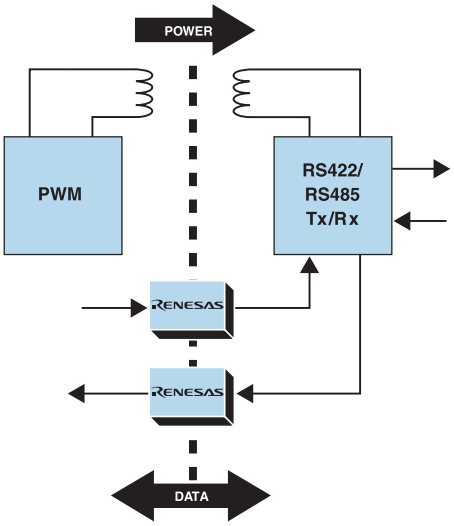
Recommended Optocouplers by Application



RS422/485 Interface Isolation

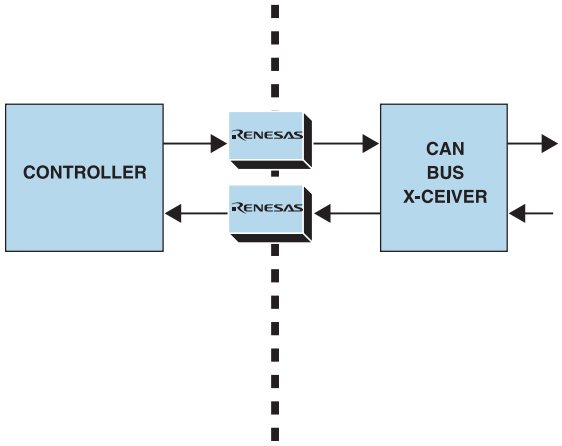
The RS485 serial communications standard is commonly used in data acquisition applications. The standard supports 32 drivers and receivers in a 2- or 4-wire differential configuration with cable lengths up to 4000 feet. Galvanic isolation becomes critical in the prevention of ground loops, electrical noise, and power spikes in widely distributed systems.

Application Requirements

- Wide range of data transfer rates: 1 Mbps to 15 Mbps
- High Common Mode Rejection Ratio (CMRR)
- Compact size
- Repeatability
- Reliability

Recommended Renesas Optocouplers

Tx/Rx Input/Output:
PS8302L, PS9122, PS9313L, PS9822-1, 2 *(1 Mbps)*
PS9124, PS9817A-1, 2, PS9324L, PS9587 *(10 Mbps)*
PS9121, PS9821-1, 2, PS9151, PS9351L, PS9851-1,2 *(15 Mbps)*



CAN Interface Isolation

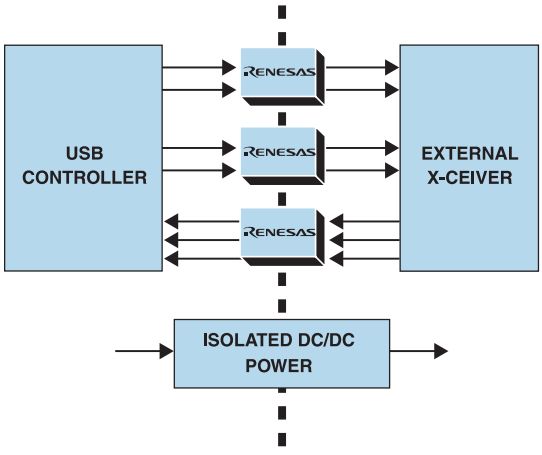
Controller Area Network (CAN) is a serial communications bus popular in industrial applications. Point-to-point and multi-point systems use it to coordinate and synchronize events. Isolation is required in these distributed systems to protect against over-voltage transients, prevent ground loops, and reduce signal distortion.

Application Requirements

- Accurate signal timing
- High Common Mode Rejection Ratio (CMRR)
- Compact size
- Repeatability
- Reliability

Recommended Renesas Optocouplers

PS9151, PS9123, PS9351L, PS9851-1, 2, PS9121



USB 2.0 Interface Isolation

USB is an inexpensive, high speed bus-integration interface used in computer-based systems. While the USB standard does not mandate isolation, designers recognize its importance in critical systems. Isolation protects USB interfaces from electrostatic discharge (ESD), ground loops, common mode noise, and EMI interference.

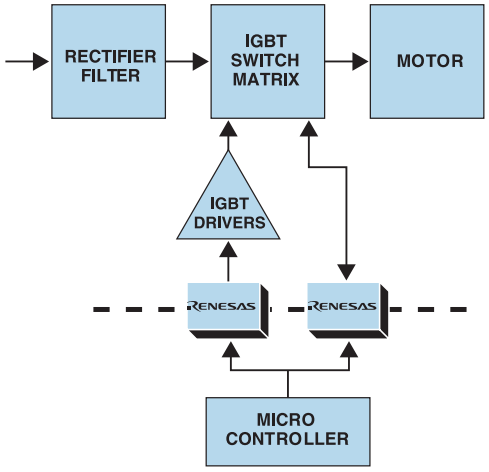
Application Requirements

- High CMRR
- Compact Size
- Low power consumption
- Data Transfer Rates: up to 15 Mbps
- Reliability

Recommended Renesas Optocouplers

PS9121, PS9123, PS9124, PS9151, PS9351L, PS9821-1, 2, PS9851-1, 2

Recommended Optocouplers by Application



Motor Drive Control Isolation

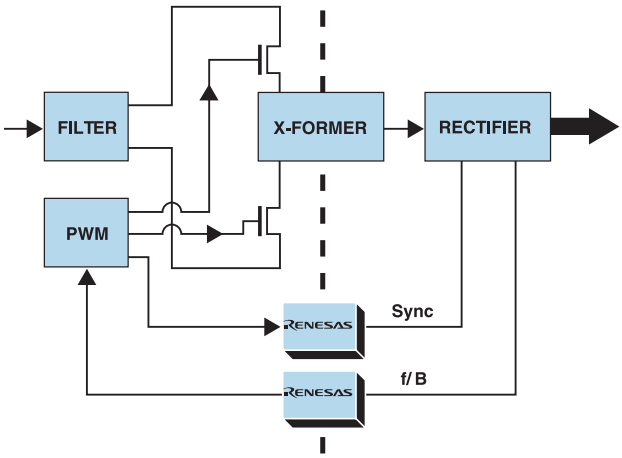
Motor controllers combine low level logic with high voltage, high power electronics like Intelligent Power Modules (IPM). Isolation enables communication between the controllers and the drivers at both the high and low side power modules. Faults and other events are typically transferred across this isolation barrier as well.

Application Requirements

- Fast response time: <0.8µs
- High Common Mode Rejection Ratio (CMRR): >10kV/µs
- Isolation: typically 2500V AC - 5000V AC
- Long creepage: up to 8mm

Recommended Renesas Optocouplers

PS9113, PS9513, PS9506, PS9402, PS9905, PS9303L, PS9306L, PS9307AL, PS9308L, PS9309L, PS9313L, PS9331L, PS9332L, PS9531



Power Supply Isolation

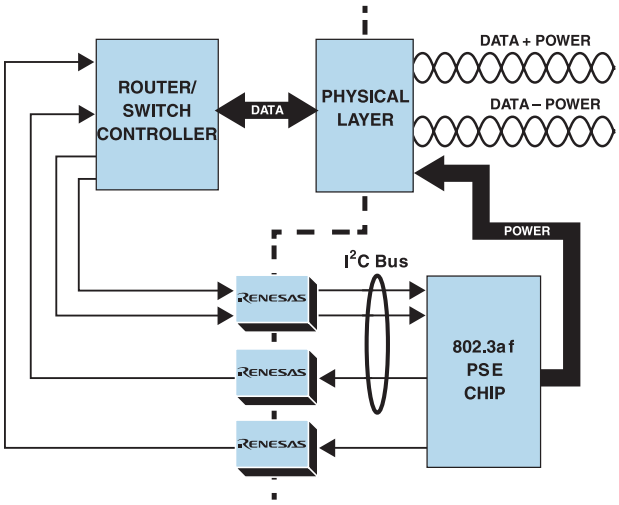
Power supplies are used in a wide variety of applications. Galvanic isolation is required for safety and to allow independent secondary side isolation. High speed optocouplers are used to transfer gate drive and synchronous rectification signals from the controller to the switching elements.

Application Requirements

- High temperature: up to 110°C
- Fast response time
- Low power consumption
- Compact size
- Repeatability

Recommended Renesas Optocouplers

Sync: **PS8501, PS8101, PS8302L**
Feedback: **PS2381, PS2561D, PS2761B, PS2861B** *(Transistor Optocouplers)*



802.3af Power over Ethernet (PoE)

PoE offers a simple, reliable, cost effective solution for power transmission. It can deliver 13W of power over existing Ethernet cabling in applications ranging from industrial IT to home office networks. To ensure safety, the 802.3af standard requires 1500V AC of galvanic isolation between the main switch circuitry and the Media Dependent Interface (RJ-45 terminal). The communication from the switch to the PSE chip occurs over an isolated I²C bus.

Application Requirements

- 3.3V and 5V operation
- 1500VAC minimum isolation
- Small size
- Standard Mode (100 Kbps data rate)
- Fast Mode (400 Kbps data rate)
- Fast Mode + (1Mbps)
- High Speed (3.4 Mbps)

Recommended Renesas Optocouplers

PS9122 *(Standard Mode)*
PS9121, PS9122 *(Fast Mode)*
PS9121, PS9821-1, 2, PS9123 *(High Speed)*
PS9122, PS9822 *(Fast Mode +)*
PS2841-4, PS2911 *(Transistor Optocouplers)*

Digital Optocouplers for IGBT and MOSFET Motor Drive Applications *Continued...*

Motor Drive Isolation

Motor drive applications demand more voltage and current than most ICs and microcontrollers can provide. A variety of devices have been developed to address the problem such as IGBTs, MOSFETs and Intelligent Power Modules (IPMs). These high power drivers use optocouplers to isolate other ICs and components from the power spikes and electrical noise that their motors generate.
